CONNECTOR PIPE SCREEN TRASH CAPTURE DEVICE

Fabco's Connector Pipe Screens (CPS) are catch basin insert devices that are designed to treat water that's flowing through the catch basin. Our design engineers took care to ensure our Connector Pipe Screens could be dismantled to fit through a typical Ø 22" manhole opening, making it an easy installation in both new and existing catch basins. Once the CPS is installed in front of the outlet pipe, trash and debris will remain trapped inside the catch basin while still allowing filtered stormwater to exit via the effluent pipe. All of our standard CPS devices are designed to treat and bypass water at the same rate as the pipe they're protecting.

FABCO CPS DEVICES

- Available for outlet pipes up to Ø 36"
- Perforated Screen is 51% open Area w/ 3/16" Holes
- Screen Open Area ≥ Outlet Pipe Area
- Bypass Prevents Flooding if Screen is Blinded
- Bypass Area ≥ Outlet Pipe Area
- Collapses for entry via curb inlet or Ø 22" manhole opening.

CPS LITE FEATURES:

- Available in Aluminum or Stainless Steel
- Minimalistic design, add only the features you need:
 - Bottom cover for elevated pipes.
 - Top cover for pipes below a curb/grated inlet.
 - CASQA certified top cover.
- Customizable shape/size for abnormal catch basins.

HINGED CPS FEATURES:

- Available in Stainless Steel
- Extremely durable, ideal for intermittent cleanouts.
- Fully framed with 304 stainless steel angle iron.
- Perforated top cover always included.
- No option to customize shape/size.
