

## Pandora Compressor Station

West Union, West Virginia

### Featured Product(s):

AquaPhix, JumpStart, BioPrime, ProGanics, Flexterra.

### Product Advantages:

- AquaPhix. Used to lower the PH of Alkaline (soil PH higher than 7.3).
- ProGanics Biotic Soil Media. Provide the organics to establish the nutrient cycle needed for long term vegetation.
- Flexterra Hydro-Mulch. Provides a 99% effective blanket of erosion control.

### The Challenge

Cut slope along the access road could not maintain vegetation. Resulting in heavily eroded slopes. The slopes varied from 2:1 to 1:1 over 3 acres. Several attempts using standard hydroseeding products had been tried over the previous 7 years with limited success. A soil test was taken by the Ferguson representative. Results of the soil test indicated high Alkaline soil with organic matter less than 1.5%.

### The Solution

Test plots were established for a Hydro-seeder to apply the recommended AquaPhix, Jump Start, BioPrime, ProGanics, Seed, Fertilizer, Flexterra and FlocLoc to small areas of the slope. Seeing great results. The owner proceeded to regrade and establish drainage channels on the slopes. Followed up by application of products used on the test plots. Results 4 months later shown in last photo.
