

CASE STUDY

OKC Zoo Orientation Plaza & Africa Savannah

Oklahoma City, Oklahoma

PROJECT OVERVIEW

PRODUCT:

GeoBlock & GeoPave

ENGINEER:

Wallace Design Group

CONTRACTOR:

Pitzer Lawn Management

CHALLENGE:

The client needed to find something that was aesthetically pleasing and also offered adequate load support.

CONSTRAINTS:

Aesthetics were a major decision maker. Ease of installation was key because the zoo was open while construction was going on, and this exhibit was in the middle of the park. These pavers were easy to transport due to the nature of their light weight.

SOLUTION:

GeoPave and GeoBlock Pavers were utilized atop prepared subgrade. No base course was necessary due to preexisting subgrade strength and expected light traffic over the area. The folks at the zoo were familiar with these type of applications and actually requested this product and had used it in other areas in the past. The material worked like a charm. The installation was seamless and finished application turned out great.
